

THE STORY BEHIND THE BOOKS

Two series. One foundation for life online.

Cyber Ved Kids turns online safety into stories children can understand, remember and talk about. Created by Neha Agarwal, the two series grow with their readers: Little Sparks (ages 4–6) introduces the first small safety habits, while Cyber Shields (ages 7–9) explores passwords, deceptive messages and online trust. Together, the six books make complex ideas accessible without making the digital world feel frightening.

WHY NOW

Children encounter screens, games, pop-ups and online conversations early. Waiting until they are older can mean waiting until habits are already established. These books start the conversation sooner, giving children simple language for asking for help, recognising pressure and noticing when something does not feel right. The aim is not to keep children afraid of technology, but to help them approach it with confidence and support.

GUIDING PRINCIPLES

Empowerment over fear

Build confidence rather than anxiety. Children are encouraged to pause, make choices and turn to a trusted grown-up; the responsibility for keeping them safe remains with adults.

Storytelling over lecture

Use characters and everyday dilemmas to make online safety relatable. A story opens a conversation, rather than delivering a checklist of instructions.

Instinct over theory

Make small, repeatable habits memorable: ask first, breathe before clicking and notice uneasy feelings. The goal is a useful response in the moment, not memorising technical terms.

ABOUT NEHA

Neha Agarwal is a global cybersecurity executive and children's author who previously worked for Vodafone as a cybersecurity lead. She brings that professional perspective to Cyber Ved Kids, translating complex online risks into calm, child-friendly stories. She creates and presents cybersecurity training for early-years staff through The National College, contributes as an expert panellist for Internet Matters, and is an online-safety partner to Waite EYTS.

AGES 4-6 / THREE BOOKS

Little Sparks

Bright picture books for early years and first readers. Each adventure centres on one everyday digital dilemma and a small safety habit, making the series suited to shared reading at home or in an early-years setting.

Cyber Ved and the Shiny Button

ASK FIRST

A glowing button and a tempting tap bring a familiar screen-time moment into a gentle story. When something new appears on a tablet, the first safe step is to pause and ask a grown-up before pressing it. Shiny Button gives young children a simple habit they can practise immediately, while giving parents and teachers an easy way to talk about curiosity, permission and making choices together.

Cyber Ved and the Pop-Up Prankster

BREATHE BEFORE YOU CLICK

Flashing pop-ups promise exciting rewards and urge children to tap right now. The Pop-Up Prankster explores how urgency and bright distractions can rush a decision, helping little readers recognise that they do not have to act straight away. Taking a breath, resisting the rush and telling a grown-up become reassuring alternatives to a hurried click. It is a playful starting point for talking about persuasive messages and online tricks.

Cyber Ved and the Curious Fox

STRANGER DANGER ON THE WEB

A friendly fox on a screen asks questions that begin to feel a little too personal. Curious Fox introduces a gentle but important idea: someone seeming kind online does not mean it is safe to share private details. The story invites children to notice an uneasy feeling, keep information such as their name, school and home address private, and ask a trusted grown-up for help. It makes online boundaries easier to discuss without using fear.

Available on Amazon UK in paperback and Kindle editions.

AGES 7-9 / THREE BOOKS

Cyber Shields

Three story-led adventures for children becoming more independent online. Cyber Ved and his friends bring passwords, phishing and online trust to life, helping readers develop confidence, judgement and the habit of asking for support.

Cyber Ved and the Password Gobbler

PASSWORDS & PRIVACY

A hungry creature gobbles up passwords that are too easy to guess. Through Cyber Ved's adventure, readers discover why a password needs to be strong and kept secret, rather than something obvious or easily shared. The memorable idea of "long, silly, secret" makes password safety concrete and approachable. The story opens a practical conversation about protecting accounts and understanding that some information belongs only to you.

Cyber Ved and the Phishy Prankster

SPOTTING DECEPTIVE MESSAGES

Baited messages and tempting promises reveal the tricks behind phishing. The Phishy Prankster helps readers notice warning signs: an offer that seems too good to be true, a request for private information, or pressure to act quickly. Instead of reacting to the message, children are encouraged to pause and check with a trusted grown-up. A technical topic becomes an understandable story about recognising a trick before being drawn into it.

Cyber Ved and the Friendly Fraudster

ONLINE TRUST & BOUNDARIES

The Friendly Fraudster explores a harder question: what if an online risk arrives looking friendly? The story helps readers think about trust, personal information and the difference between a reassuring appearance and safe behaviour. It creates space to discuss uncomfortable feelings and when to seek help, while reinforcing that children do not need to handle confusing online situations alone. The focus is on thoughtful boundaries, not suspicion of everyone they meet.

Available on Amazon UK in paperback and Kindle editions.
